Creating JSP in Eclipse IDE with Tomcat server

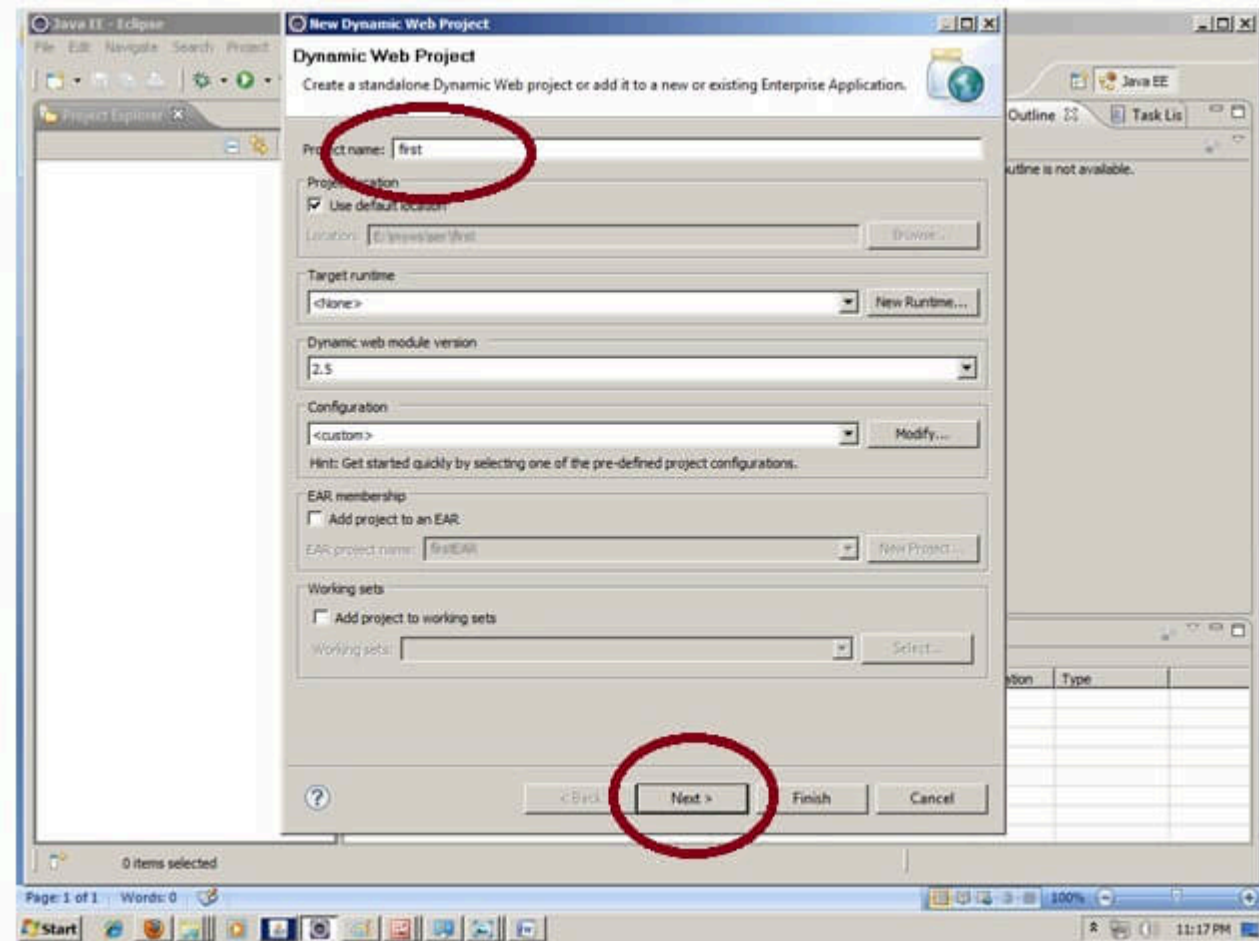

- Create a Dynamic web project
- create a jsp
- start tomcat server and deploy the project

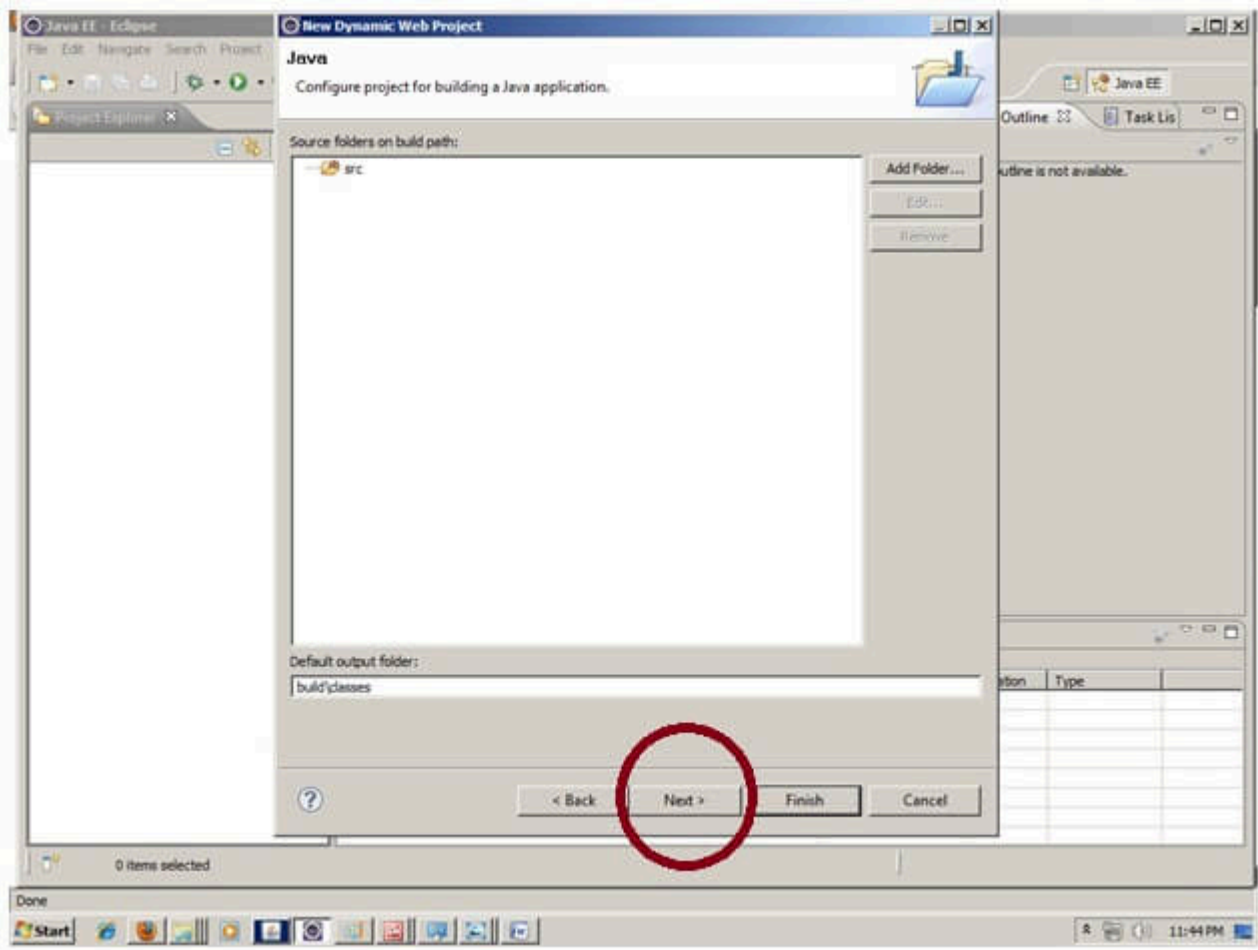

1) Create the dynamic web project

For creating a dynamic web project click on File Menu -> New -> dynamic web project -> write your project name e.g. first -> Finish.

1. Creating JSP in Eclipse IDE with Tomcat
 1. Create a Dynamic web project
 2. create a jsp
 3. start tomcat server and deploy the project

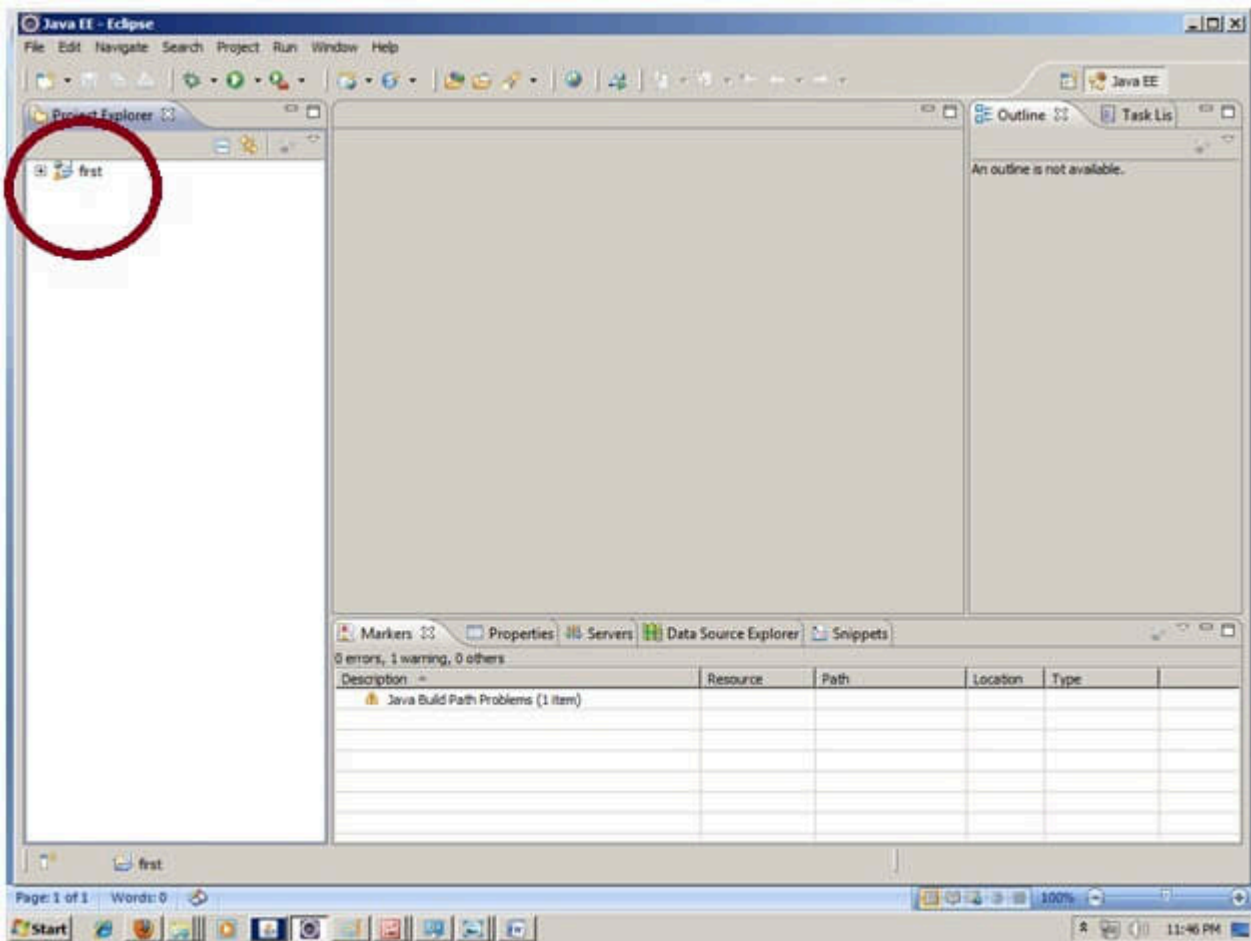

Free Learning Platform For Better Future

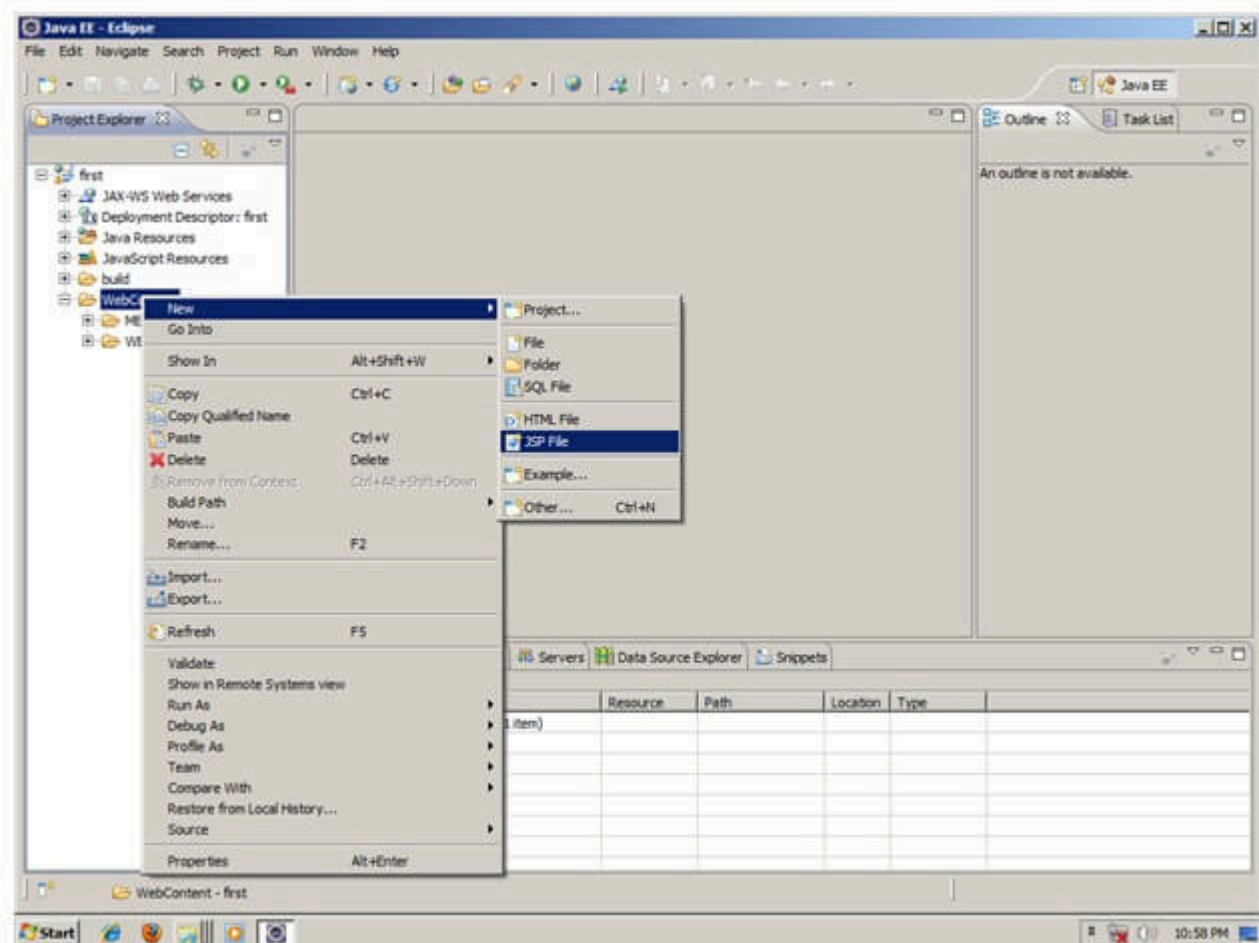

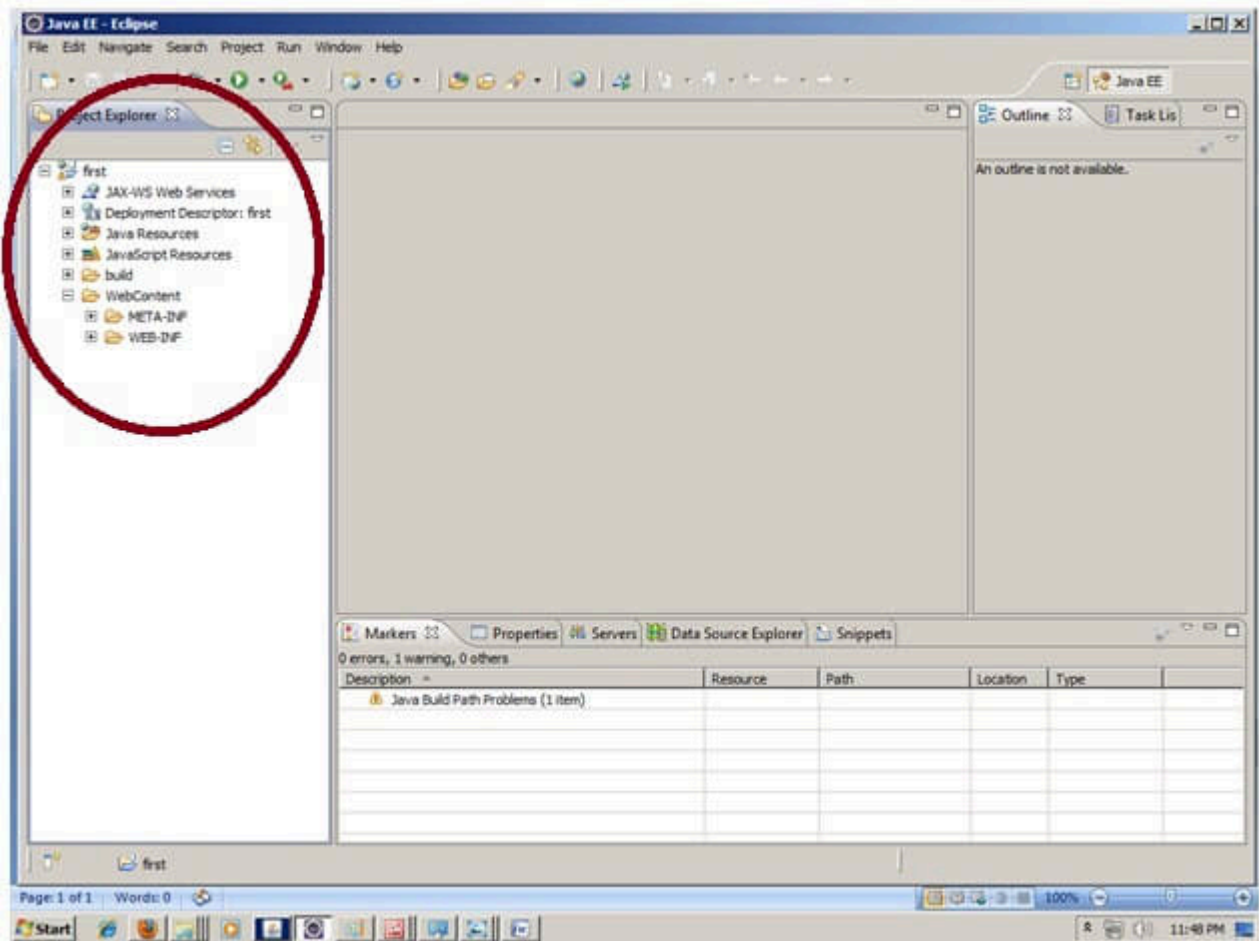

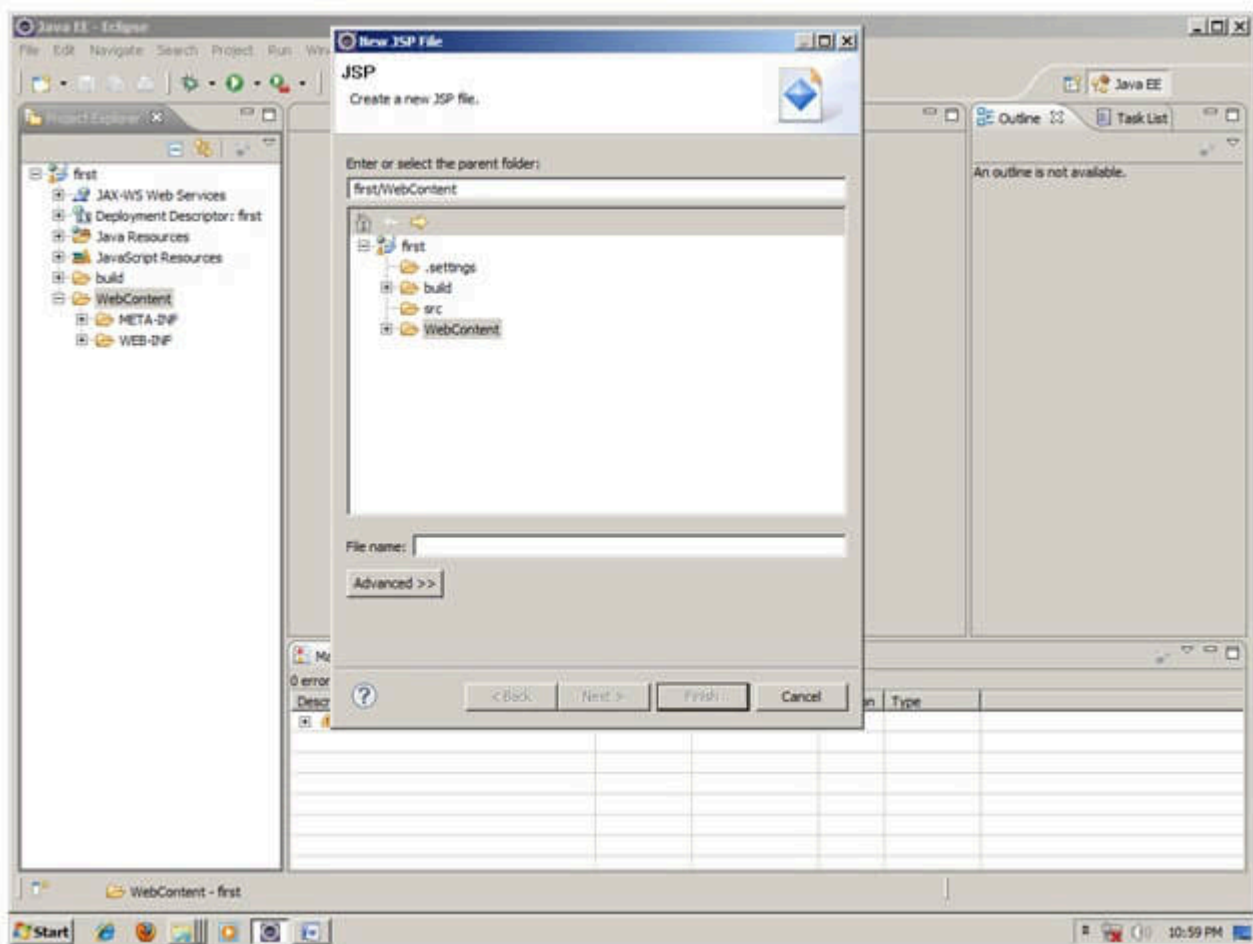

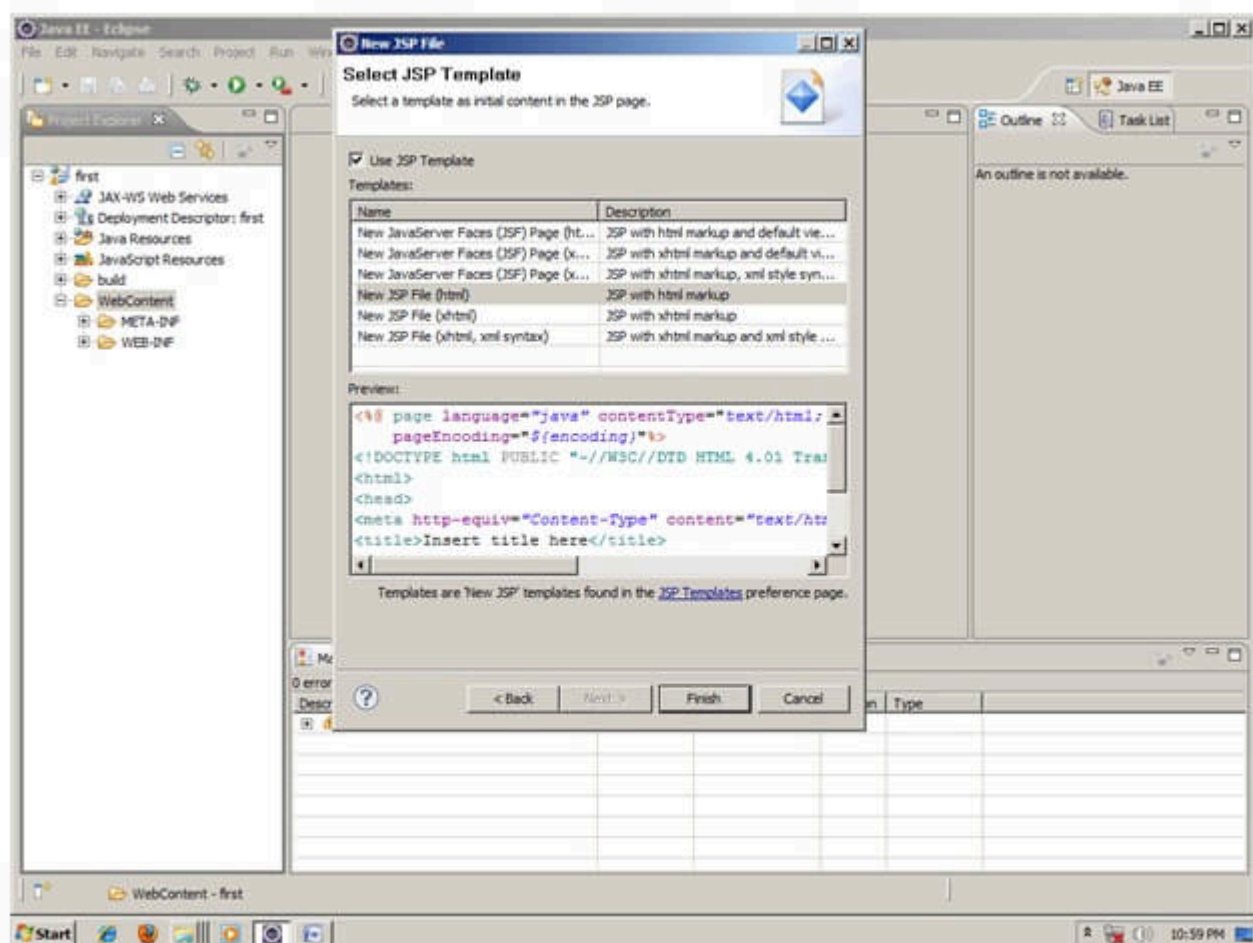

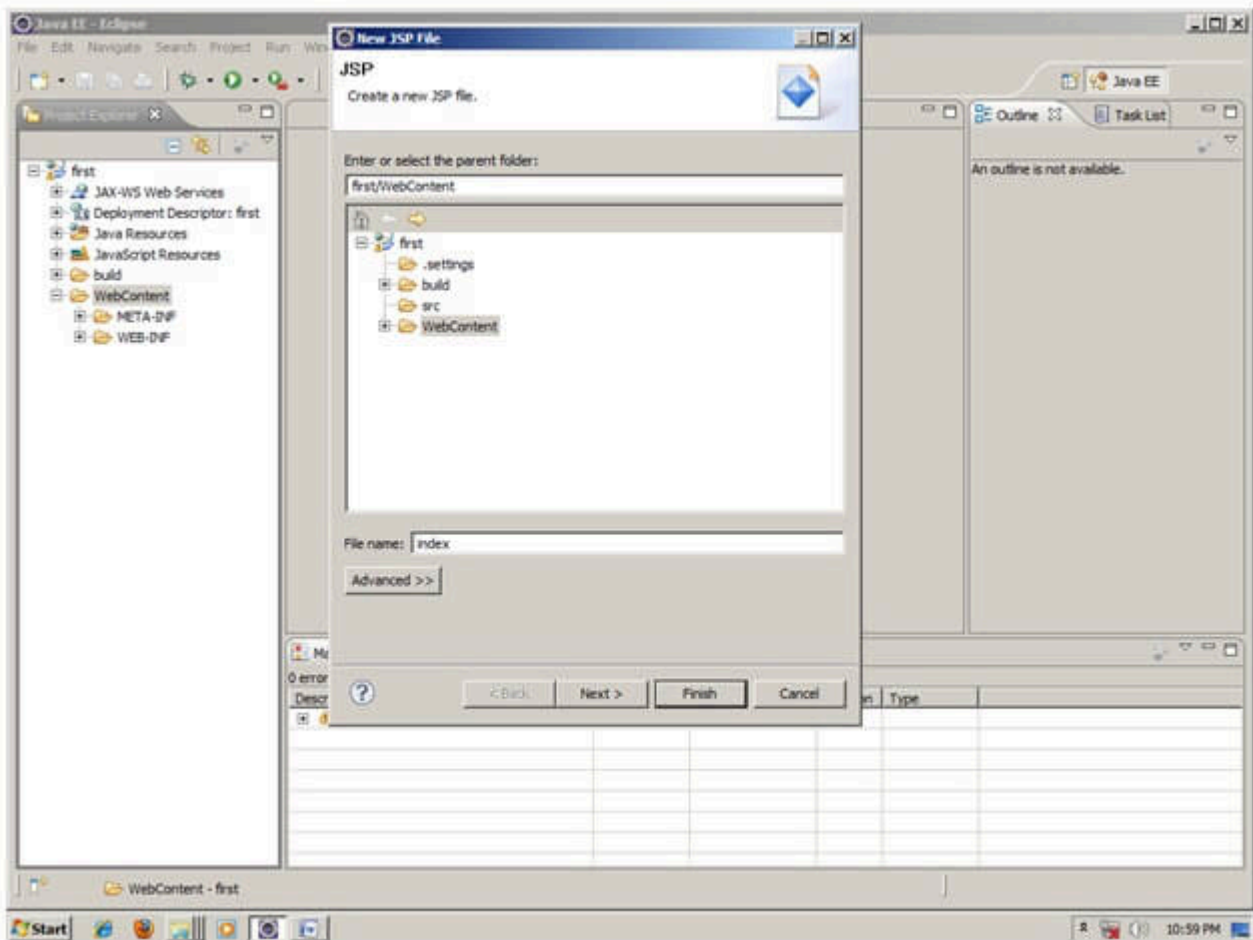

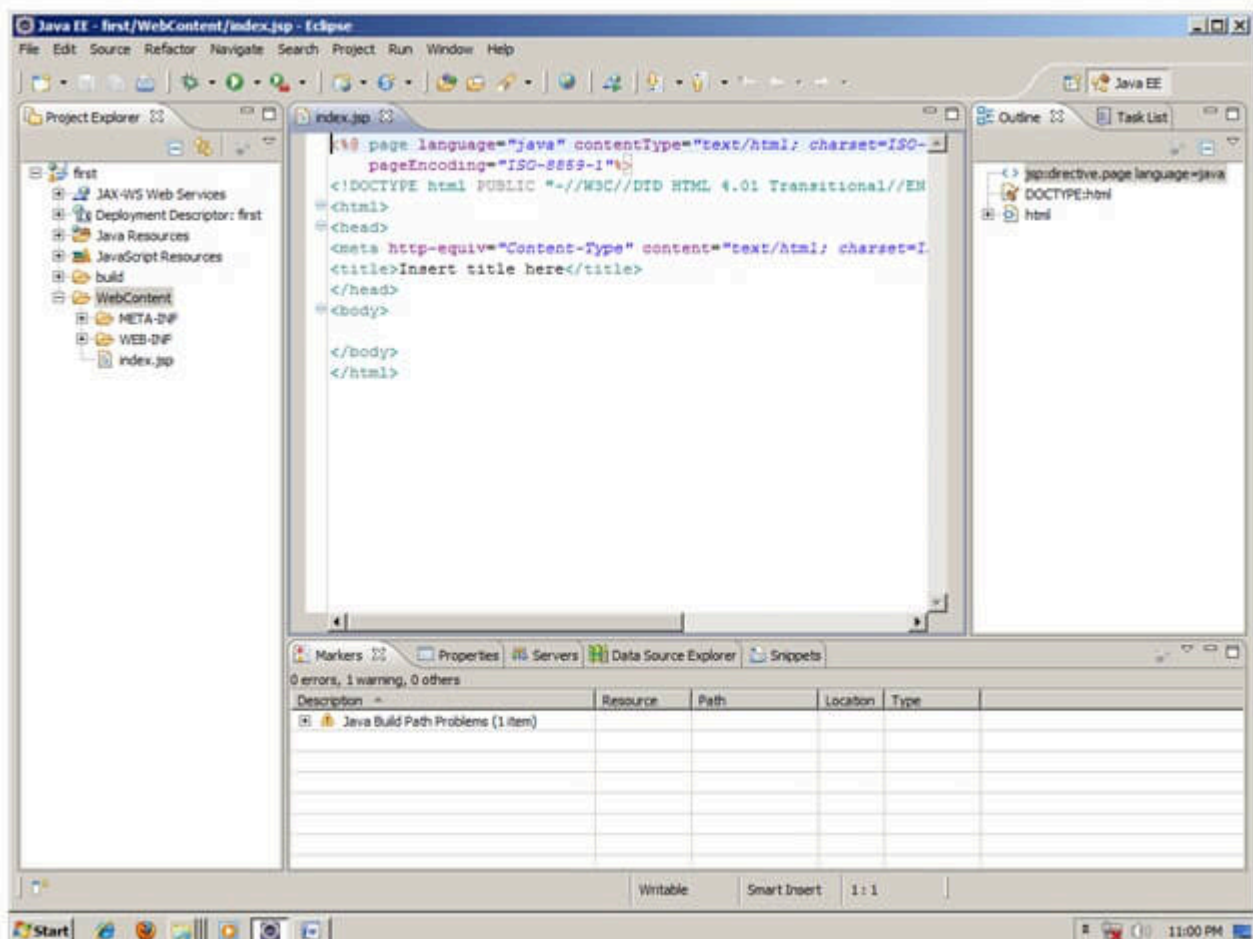

2) Create the JSP file in eclipse IDE

For creating a jsp file explore the project by clicking the + icon -> right click on WebContent -> New -> jsp -> write your jsp file name e.g. index -> next -> Finish.

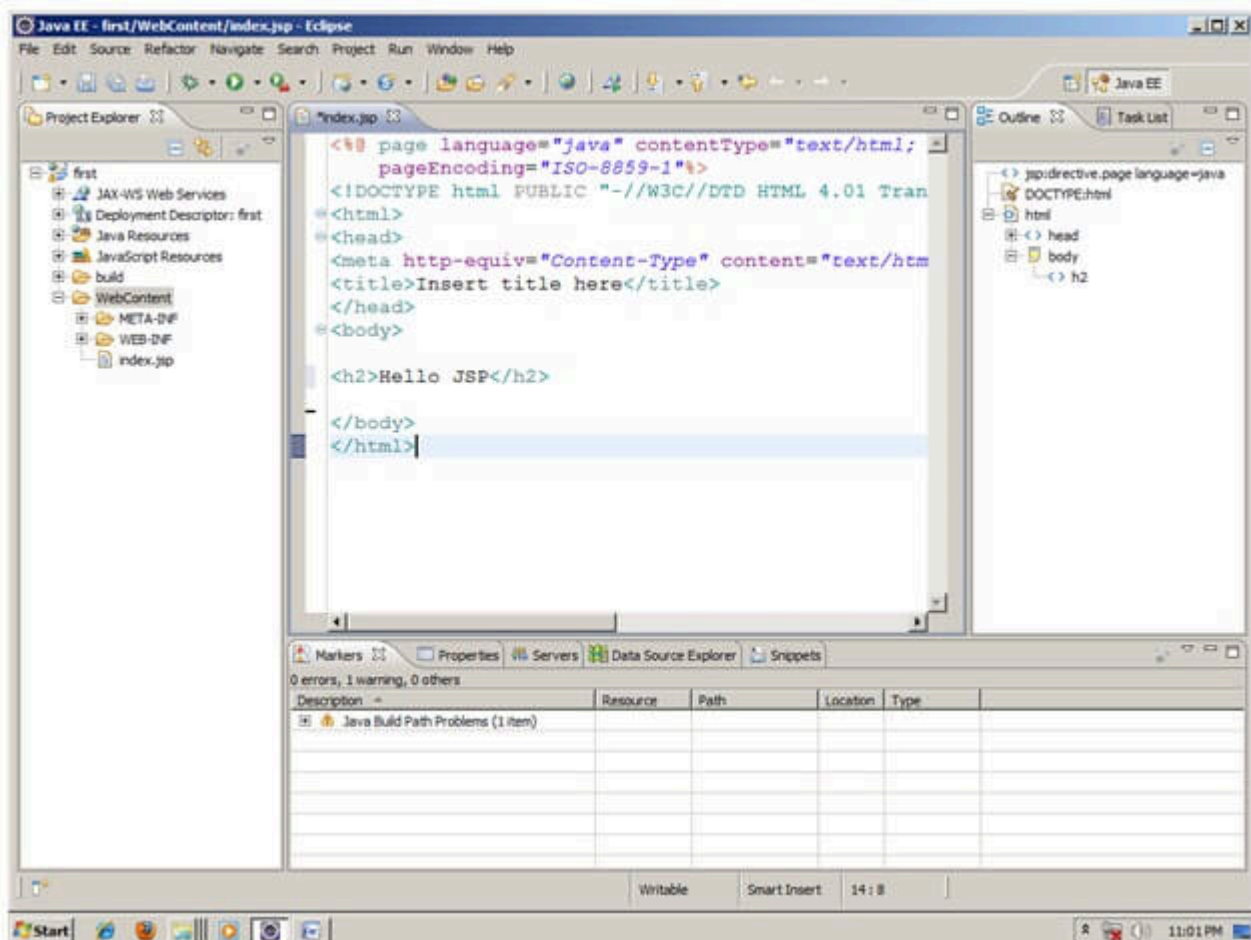

Now JSP file is created, let's write some code.

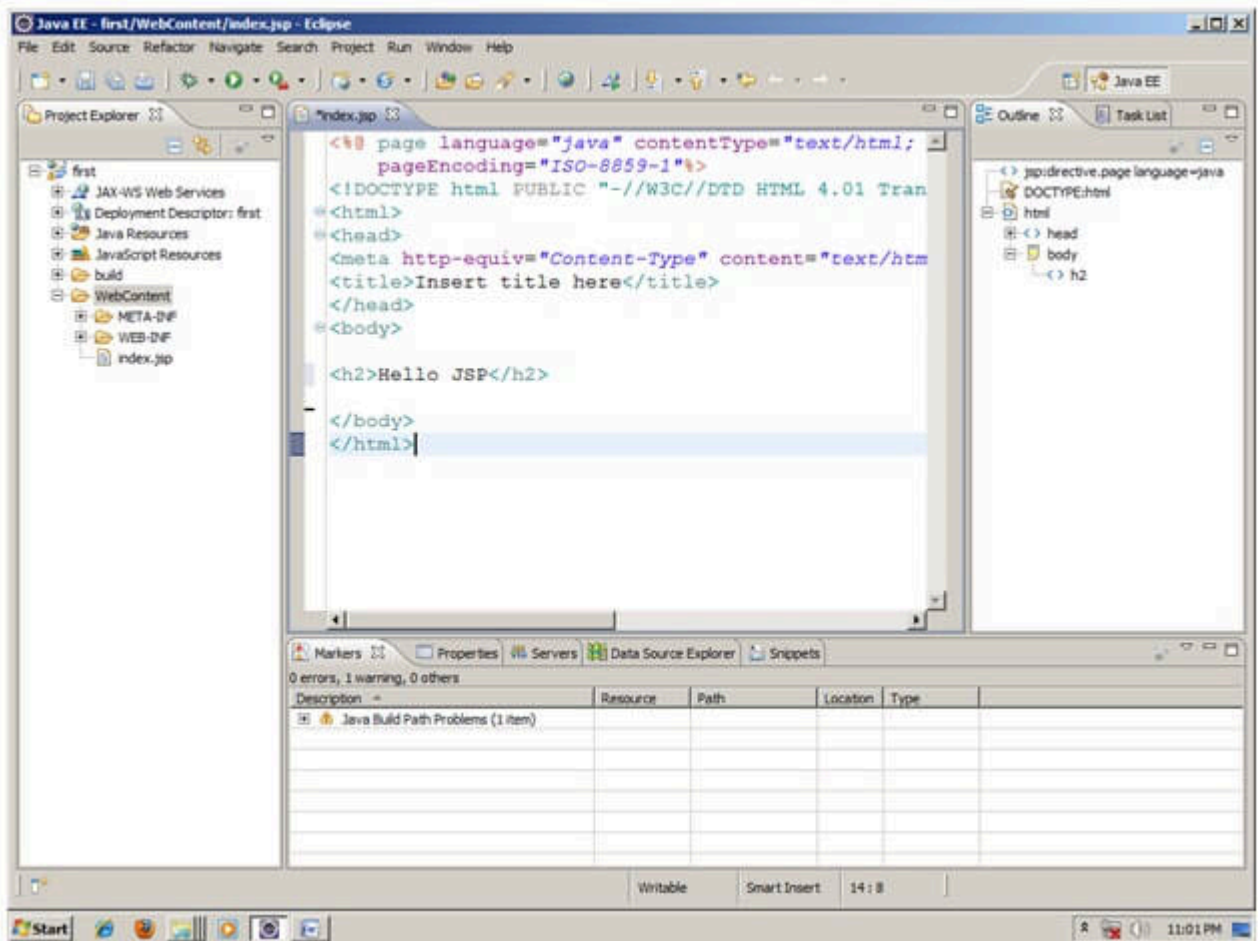

3) Start the server and deploy the project:

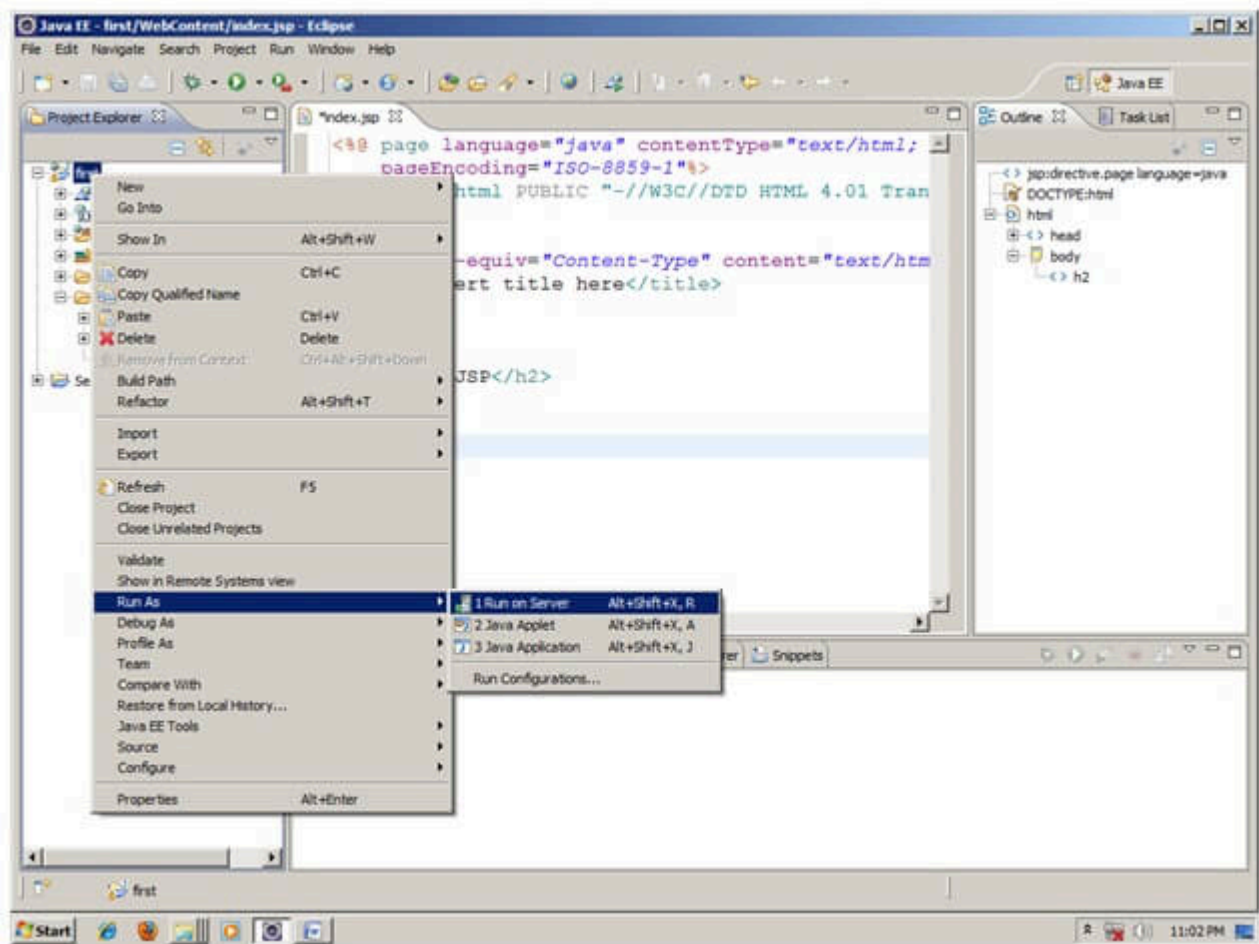

For starting the server and deploying the project in one step Right click on your project -
> Run As -> Run on Server -> choose tomcat server -> next -> addAll -> finish.

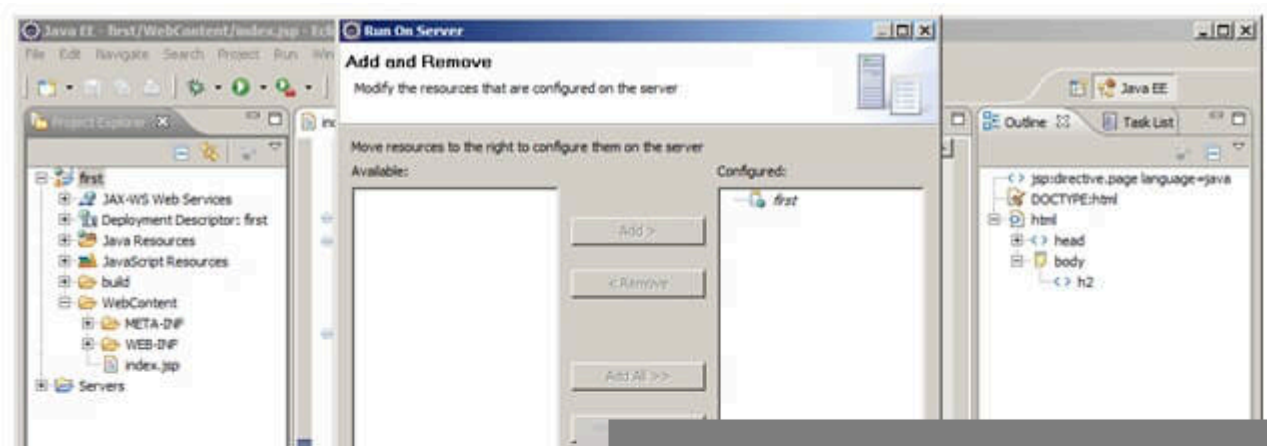

If you are using Eclipse IDE first time, you need to configure the tomcat server First. Click
for [How to configure tomcat server in eclipse IDE](#)

Now start the tomcat server and deploy project

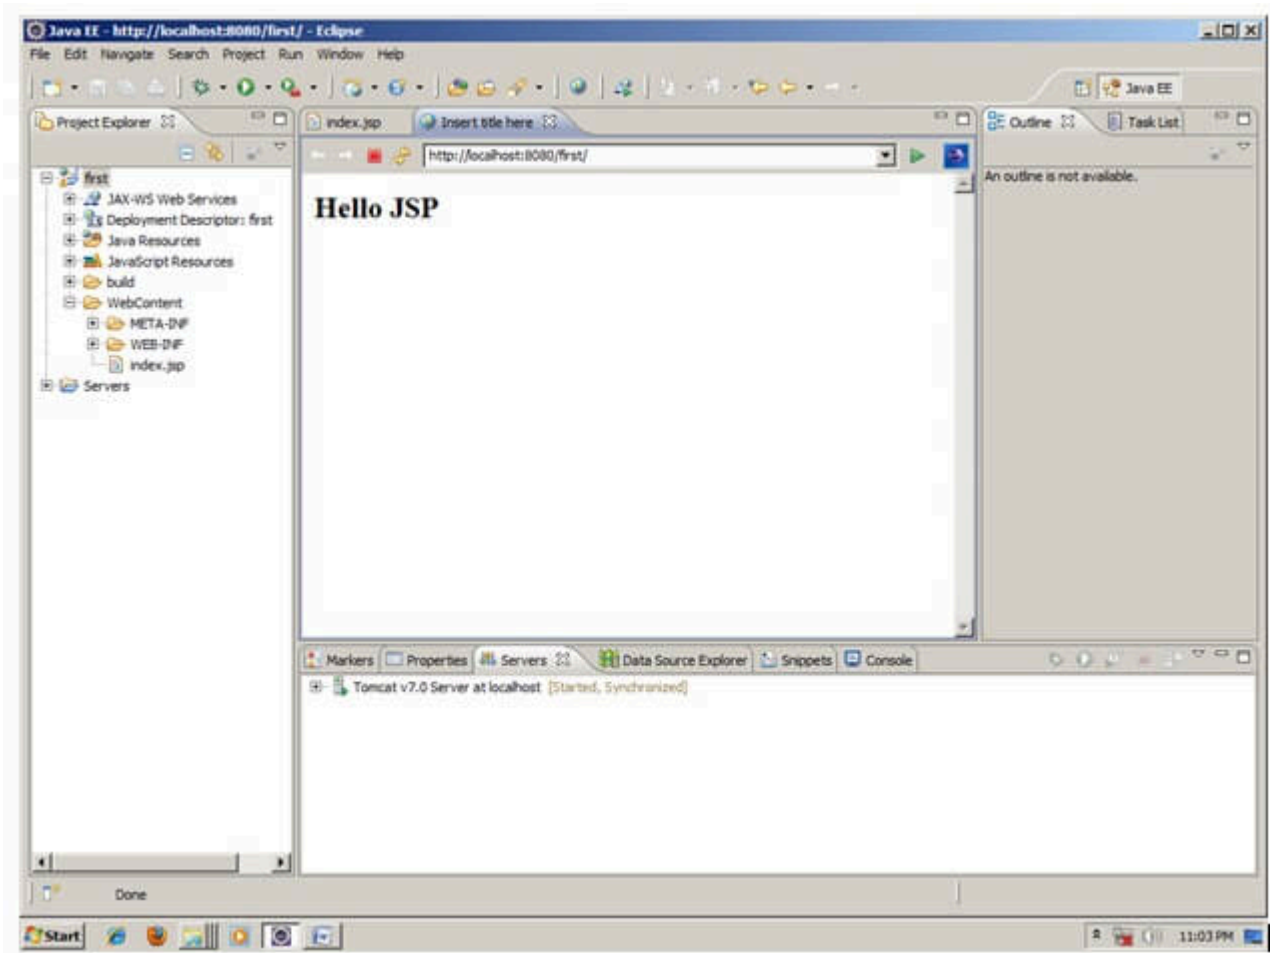

For starting the server and deploying the project in one step Right click on your project -
> Run As -> Run on Server -> choose tomcat server -> next -> addAll -> finish.

Yes, Let's see JSP is successfully running now.
